

AUTOMATIC AWNINGS

LONGEVITY AND PRACTICALITY

The Automatic Awning is a simple, cord-free solution. It is particularly suited to ground floor positions, where the Awning needs to be installed close to the window in order to provide a high level of privacy and sun protection. In strong winds, the Automatic Awning cleverly responds by retracting, in order to protect the fabric from weather damage.

TECHNICAL INFORMATION

Types of Automatic Awning

There are two types of Automatic Awnings. The first is the Standard Automatic Awning, which allows for a range of arm sizes; 150, 300, 450 or 600mm. The second type is the Systems 2000 Automatic Awning, which allows for the arms to be cut to any size.

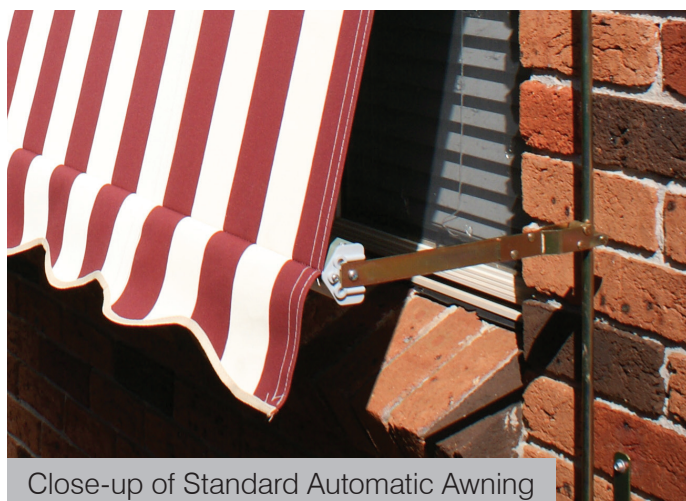

Size

The Automatic Awning can be made up to 4 metres wide. This means that a single Awning can cover a wide window, or even multiple windows in close proximity to each other.

Control

The Automatic Awning features self locking arms, which slide along guide rails. The arms are easy to operate by hand or pull stick, and no cords or cables are required. In strong winds, the Awning cleverly retracts on its own, protecting the fabric.

BENEFITS

Close-up of Standard Automatic Awning

Close-up of Automatic Awning System 2000

Retracts In Strong Winds

In strong winds, the Automatic Awning automatically retracts to protect the fabric.

Installs Close to Window

This means that the Awning does not significantly protrude, making it ideal for windows which are close to garden paths and driveways.

Child-Safe

The lack of cords or cables adds an extra level of child-safety.

Satisfaction Guaranteed

Perfect installation is assured with our specialist team, and peace of mind with a Wynstan 3 year warranty*.
