

PIVOT ARM
AWNINGS

MAINTAIN AIR FLOW

The Pivot Arm Awning operates on a pivoting arm which moves in an arc as it extends and retracts. This function provides a larger space between the awning and window, allowing for greater air circulation into your home, while still keeping the sun at bay. For extra convenience, your Pivot Arm Awning can be fitted with a Wynmotion motor to enable remote control operation with ease, ideal for operation of awnings above ground floor.

TECHNICAL INFORMATION

Design and Fabrication

Pivot Arm Awnings offer many design options including fabric, hood colour, and whether the trim is flat or scalloped.

Pivot Arm Awnings fabrics include canvas, acrylic or sunscreen fabric.

Installation

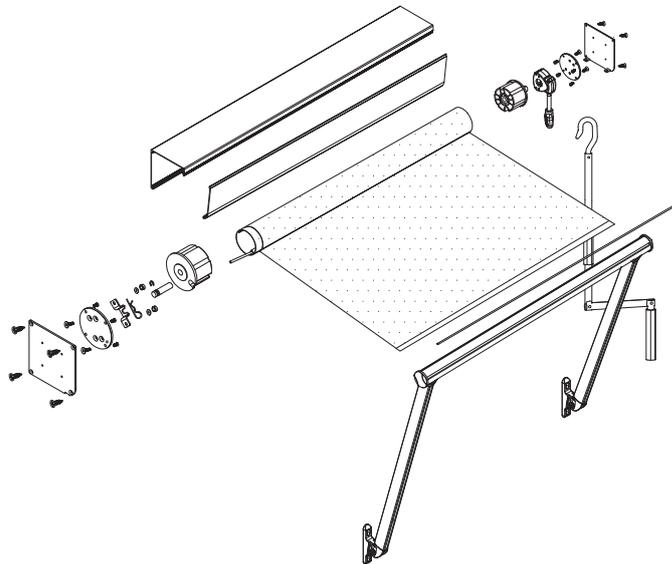

Pivot Arm Awnings are suitable for the exterior of both windows and doors. They have spring-loaded arms to hold the fabric taut – fantastic for moderately windy locations.

Operation

Pivot Arm Awnings are operated by crank control or via a rope or tape which can be fed into your home, offering internal control. This is especially important on second storey or higher level installations. Pivot Arm Awnings can also be motorised.

Size

Pivot Arm Awnings can be made up to 5.1m in width, making them suitable for large windows.

BENEFITS

Close-up of flexible arm position

Close-up of tensioned arm

Air Circulation

When compared with other awnings, the Pivot Arm Awning allows superior air circulation into your home whilst keeping the hot Australian sun at bay.

Design

The Pivot Arm Awning offers a variety of choices in regard to colour and design for both the awning itself and fabric choices.

Child-Safe

The lack of cords or cables adds an extra level of child-safety.

Automation

Ability to be automated for greater convenience.

Satisfaction Guaranteed

Quality installation is assured with our specialist team, and peace of mind with a Wynstan 3 year warranty*.

*For more information about our Wynstan 3 year warranty, please see our Warranty & Care Guide manual.
